Dealing with dry seasons
Need to protect paddocks & livestock
Stock Containment Areas
Shade & shelter is essential for stock during drought
Solid construction of fences & gates
A visual barrier and strong corner posts & fire proof
Reliable water is essential
Good quality water away from feed area (make them walk)
Introduce new feeds slowly
Feeding facilities can be simple
Simple feeders, use what you have available
Make sure all have access to feeders
Lick feeders, regulate the output
Fibre is very important to keep the rumen healthy
Transition stock off hard feed at end of drought
It will rain again!
